WHO'S YOUR DADDY 2022 BULL & FEMALE SALE

Thursday, April 7, 2022 - 1:00pm
Saskatoon Livestock Sales - Saskatoon, SK
(5 miles west on Highway #14)

Welcome

Welcome to the 19th Annual Who's Your Daddy" Shorthorn bull sale. In this catalogue you will find 58 thick, easy fleshing Shorthorn bulls. These bulls represent the top cut from over 400 purebred Shorthorn females that are raised under commercial conditions. They are bred to go out and sire cattle that can survive and produce with a minimum of feed and labor, the two biggest costs facing our industry today.

If you have any questions about the offering or unable to attend the sale, feel free to contact the sales staff or consignors and we will be happy to assist you. The bulls will be available for viewing Tuesday and Wednesday.

-Bull Sale Consigners

Delivery: Free delivery to central locations within 300 miles of Saskatoon. Delivery over 300 miles at cost. \$100 off purchase price of your bull if you haul him home sale day. (Bull must be paid for in full in order to receive the discount).

U.S Buyers: A \$300.00 per lot will be applied to your purchase. This will include all necessary vet inspections, health papers, brokerage fees and delivery to the border. We will guarantee that your bull will be eligible to export to the USA or we will refund your purchase price. For our American buyers the U.S. dollar enjoys a premium over the Canadian dollar. Exchange rate will be announced sale day.

Buyer Specific Bull Sale Service: If you are unable to attend the sale we would be more than happy to help select a bull to suit your needs. If you are not happy with the bull upon delivery, we'll load him up and take him home. If you are not happy, we aren't happy.

Buyers Option: Buyers may leave the bulls at the farm at their own risk until May 1, 2022 at no cost. Bulls left at the farm must be insured.

Insurance: Will be available sale day.

BELL M FARMS

The Moellenbeck's, Englefeld SK

Building Better Beef is what this industry is all about. Here at Bell M Farms, only 20% of our bull calves are retained as bulls. They are selected on size, quality, feet, legs, testicles, color and disposition. These bulls are grown out on a high roughage (straw), grain and a 32% beef supplement mixture along with a limited amount of hay. Remember grown out, not fattened. These bulls will be able to serve a large number of females for you to help Build Better Beef. As with all the bulls born at Bell M Farms #1 you have to be born unassisted to make the first hurdle to keep your nuts. Then we start looking at birth weight (they get weighed with a scale. No tape or eyeballing) structure, horns, color, performance, disposition, etc.

We have also taken the approach of 'if you can measure it, record it'. This is all in an attempt to provide you, our customer, the most information possible. We do things like wieghing the cowherd, it's an interesting task as we are often asked 'what size is their mother'. Studies show a cow should easily have a calf 7% of their body weight. Thus, a 1500 lb cow should be able to deliver a 105 lb calf. We are more concerned about calving ease than birthweight. Our cows are also udder scored and recorded to the CSA Registry.

Every bull in this years offering we feel could be a herdsire here at Bell M Farms, we don't expect to sell you a bull if we would not feel comfortable using ourselves, yes this cuts down on quantity but skyrockets the highest quality of Shorthorn Bulls you will find in Canada.

Study the extended pedigree, Byland Gold Spear, Eionmor Mr Gus 80C, Mist 4R, Saskvalley Task Force, Ar Su Lu Massive, famous dams such as Maggie 73R, Mr Lovemore 8048 and the Talcott Joyful cow line. This all screams MATERNAL!!! The softness this bull expresses while still having so much red meat jammed in that barrel of his makes Affinity a unique breeding piece. I will put his sisters and dam against any other cow for udder structure, BEAUTIFUL! All of 35H weights and carcass data was above the average of his pen mates (Index higher than 100), this is an impressive feat while still maintaining a moderate to average frame. Royce exhibited Affinity at the Canadian National Junior Shorthorn Show this past summer in Lacombe Alberta where he claimed Reserve Champion Bull.

MURIDALE SHORTHORNS

The Muri's, Swift Current, SK

Muridale Shorthorns is located south east of Swift Current, Saskatchewan near a community called Hallonquist. The Muri farm was homesteaded in 1910 and started registering their Shorthorn cattle in 1927. The fifth generation is actively involved in the selection of genetics from proven cow lines that have been part of Muridale Shorthorns from the beginning and develop cattle to fit into today's needs. We run approximately 188 Purebred Shorthorns and 150 commercial cows. Our commercial cows are mostly Shorthorn cross. We raise our Shorthorns to work in cow calf operations that are commercial cattle oriented. We recognize the value the Shorthorn breed can offer to the beef industry, and the desirable traits that are needed to be selected for that work in our environment: calving ease, wean a heavy calf, no udder problems, and mature to a moderate weight. Our bulls that we developed are selected for these quality traits, and selected from a cow herd that's easy fleshing, moderate frame, just good functional cows. The bulls we are offering in the Who's Your Daddy Sale are genotyped and tested free for myostatin unless noted. We stand 100% behind our cattle, we believe in keeping our customers happy.

BW: 104 205-Day Wt: 644 365-Day Wt: - F.S. 5.6

When we flushed Muridale Penny 10S to Buster 14K we were hoping for something great, Pentagon 3H did not disappoint. 3H has tremendous length with a deep barrel and is very docile. He is also smooth polled. Penny 10S is a herd bull making machine with bulls working in 6 purebred herds and 1 commercial herd.

Terms to be announced.

BW: 95 205-Day Wt: 606 365-Day Wt: 1010 F.S. 5.1

History is a word that describes this bull pretty well, whether in his pedigree or his future. Sired by the great Gaylad bull who was born in the 60s and is still very relevant in today's industry. Combine him with one of the broodiest cows on our farm and you get a recipe to make history. History has a brother working in the Anwender herd and selling semen world wide through Semex. If you're wanting a Muridale bull that will be remembered throughout the ages put your hand up high and bid with confidence. History doesn't repeat itself often. Used on purebred cows last year. Terms to be announced.

SASKVALLEY STOCK FARM

The Lehmann's, Rosthern, SK

Once again, we are bringing you a group of bulls that have been bred to perform on grass in the summer and a moderate growing ration in the winter. These bulls have never been pushed for maximum gain. As calves they ate only grass and their mother's milk, NO CREEP. After weaning in December they were brought up slowly to a grower ration designed with an energy level of 50 Mcal/cwt NEgain (For frame of reference, we feed our heifer calves a ration that has an energy level of 40 Mcal/cwt NEgain and expect them to gain 1.75 pounds per day. Most feedlots in western Canada feed a fattening ration that is 60 Mcal/cwt NEgain). These bulls were kept on this ration until the end of their testing for individual feed efficiency which ended July 30 2021. They were then turned out onto grass. During the summer while grazing grass they received only salt and mineral supplementation. They did not receive any protein or energy supplements. In November they were slowly brought up to a ration with an energy level of 50 Mcal/cwt NEgain. In mid January 2022 they were dropped to a ration with 47.5 Mcal/cwt NEgain. We are trying to breed cattle that can survive and reproduce with a minimum of labor and feed. All of our bulls are TH free by pedigree. The results of myostatin tests will be available before sale day. Feel free to contact us about any information on the bulls. We would be happy to answer any questions that you may have. Videos of the bulls can be seen on our Facebook page. www.facebook.com/saskvalleyshorthorns/videos. We will try to get updated videos of the bulls a few weeks before the sale

REPLACEMENT FEMALES

We are offering a group of females that are from the heart of the heifer pen. They represent many of our top cow families. In many cases there are either full sisters or maternal sisters in the herd. Take these heifers home and breed them to the bull of your choice and reap for the profits. The delivery program we have in place for the bulls will not be applied to the heifers, but we will assist you with your purchases.

Sale Playlist on YouTube.*

EPDs

Calving Ease (CE) Listed as a percentage of unassisted calvings. A higher CED EPD predicts a sire that will have a higher percentage of unassisted calves.

Birth Weight (BW) At the basic level, birth weight is nothing more than an indicator trait for calving ease, but the emphasis on birth weight can be overdone. Economically, over selecting for low birth weights can take us in the wrong direction; cattle still sell by the pound. Use BW EPD in conjunction with calving ease. Phenotypic traits like length of body, shoulder design, head shape, circumference of bone and even frame score play a significant role in determining birth weights and calving ease.

Weaning Weights (WW) Put simply, weaning weight is the ability of a bull's calf to dry off, stagger to its feet, and grow like mad. Finding a sire with a strong WW that also excels in other economically relevant traits important to your breeding program is a key element to success.

Yearling Weight (YW) This trait is economically important since it is more indicative of growth potential through market weights taken early in the animals life. Single trait selection for YW can lead to serious problems that can affect bottom line profit. Mature must be monitored when selecting a bull for performance via YW EPD. Cow maintenance costs, calving difficulty, and even breeding problems can result. YW EPDs can be very influential if you understand your environment conditions or if you are retaining ownership in your calves from birth to slaughter.

Milk (M) A bull's Milk EPD is determined by his daughter's ability to wean heavier calves than her contemporaries. Just because a cow weans a heavier calf each year does not necessarily mean her Milk EPD should be the highest in the herd. The performance of her calf can also be attributed to the dam's or sire's growth genetics or a number of environmental factors. Milk EPDs can be too high for your environmental conditions especially in severe environmental conditions and can have a negative impact on rebreeding rates.

\$Value Indexes

\$ CEZ – (\$ Calving Ease) This index assumes a bull will only be mated to heifers, not cows. The potential profitability of the sire is measured by the incidence of live calves at birth. Moderate mature size is also emphasized in the index., but performance is not a priority. This index is also a good measure of Shorthorn females' ability to produce calving ease sires. Overemphasis of \$CEZ may cause unwanted depression of weaning and yearling performance

\$BMI – (\$ British Maternal Index) As the name implies, this multi-trait selection index attempts to measure a bull's potential profitability when complimenting the British cow base (Angus, Red Angus, Hereford, etc.). Shorthorn females can likewise be gauged at adding value to British or British-composite bulls of other breeds. A balance of growth and carcass traits is desired with a strong maternal component aimed at optimum reproductive efficiency and cow longevity.

\$F – (\$ Feedlot) Similar to a Terminal Sire scenario, \$Feedlot places strong emphasis on growth and carcass traits. This multi-trait index assumes the sire will be mated to a mix of heifers and cows and attempts to measure profitability when progeny are sold on the fed market. On the female side, mature size should be monitored closely when selecting for \$F. Overselection may cause detrimental harm to longevity, reproductive efficiency, and fleshing ability.

Ultrasound Definitions

Ribeye Area (REA) Area of the longissimus muscle, measured in square inches. The trait is moderately to highly heritable and gives an indication of overall carcass muscling.

Fat Thickness (FT) An external fat measurement taken between the 12th and 13th ribs, measured in inches.

Rump Fat (RF) An external measurement taken between the hooks and pins, measured in inches. The rump fat and the rib fat measurements are used to determine the overall external body fat.

Intramuscular Fat (%IMF) Percentage of fat in the ribeye area muscle (similar to marbling). The field technician collects four images and the values generated by the interpreting software are averaged for an overall %IMF. Marbling directly contributes to beef palatability.

Lean Yield (LY) Percentage of muscle in the carcass.

Genomic-enhanced EPD (GE-EPD) are valuable because they utilize genomic test results in addition to pedigree, performance and progeny data for increased reliability of an animal's EPD. Bulls with this logo are parent-verified.

Non-Parent EPD Average (As of Feb. 22, 2022)

CE	BW	WW	YW	M	\$CEZ	\$BMI	\$F
9	2.2	47	72	24	30.45	114.91	50.05

— Denotes top 25% of the Shorthorn Breed EPD's.

Terms & Conditions

Location: The sale will be held at Saskatoon Livestock Sales (5 miles west of Saskatoon on Hwy 14).

Date & Time: Thursday April 7, 2022

Air Travel: Saskatoon Airport is serviced by all major airlines, check with your travel agent for further details. We will be happy to look after you but please give us sufficient time if you require assistance.

Sale Day Phone: (306) 382-8088

Terms: Terms of the sale are cash or cheque, payable at par at the sale location. The right of property shall not pass until after settlement has been made; no invoicing on buyers in attendance, unless previous arrangements have been made. Every animal sells to the highest bidder and in cases of disputes, the auctioneer's decision will be final. Announcements from the auction block will take precedence over the information in the catalogue. All monies are in Canadian funds.

Mail, Phone or Wire Bids: Bidders unable to attend the sale may phone, wire or mail their bids and instructions to the sale manager, auctioneer or special representatives. Bids must be received in sufficient time prior to the sale.

Breeding Information: All cattle of breeding age are guaranteed to be breeders. All calthood vaccinates are noted in the catalogue. Any export tests will be arranged after the sale, at the seller's expense. The standard guarantee as endorsed by the Canadian Shorthorn Association will apply.

TH Status: All sale lots have been tested and are TH Free or declared TH Free by pedigree.

Pedigrees: The Canadian Shorthorn Association certificate of registration will be furnished with each animal sold, including calves by side of dam, duly transferred to the purchaser after payment has been made. Proper instructions must be provided at the conclusion of the sale. Extensions granted on order bids only. Costs incurred due to incorrect transfer will be borne by the purchaser.

Insurance: Agents will be in attendance to insure your purchases. We strongly recommend that insurance is purchased for full value.

Delivery: Every assistance will be given in arranging the shipping and delivery of your purchases. Each animal becomes the risk of the purchaser as soon as sold.

Errors: All announcements at sale time, written or oral, supersede any written material in the catalogue.

Liabilities: Who's Your Daddy, their consignors, sale staff and representatives accept no responsibility for any accidents that occur. All persons attend the sale at their own risk.
